Constant Contact Lists

List Membership

Constant Contact contacts may belong to one or more email lists.

The integration stores list IDs in:

```
Constant Contact List IDs
```

The outgoing workflow requires a configured Constant Contact list ID:

```
CC_LIST_ID
```

This determines which Constant Contact list receives new confirmed-opt-in contacts.

Changing the Destination List

If the destination list changes:

1. Locate `Config - GHL to CC` in n8n.
2. Find:

```
CC_LIST_ID
```

3. Replace it with the appropriate Constant Contact list UUID.
4. Save the workflow.
5. Test with a controlled contact before production use.

Do not use the visible list name where the API expects the list ID.
